Skills

Languages

- Python — Proficient
- SQL — Proficient
- C# - Proficient
- R — Proficient
- C — Familiar
- Java — Familiar

Frontend:

- Vue.js, Next.js,

Backend:

- .NET, Java EE

ML & AI:

- Computer vision, RAG, Reinforcement Learning, Transformers

HPC and MLOps:

- SLURM, OpenMP, MPI, Docker, Azure, Git

Databases:

- PostgreSQL, chromaDB, Supabase

Soft Skills:

- Mentoring, fast learner

Projects

Deep Reinforcement Learning for Market Prediction

Notepilot a RAG-based app

Extracurricular Activities

Board of European Students of Technology Vienna

- Full member since December 2025
- logistics responsible for beWANTED 2026 and summer Course 2026

Languages

Slovenian Mother tongue

English C1

German B1

Education

Master Of Data Science

Since March 2025

Technical University of Vienna

avg. grade: 1.3

My studies focus on two tracks — **Machine Learning & Statistics** and **Big Data & High-Performance Computing** — with coursework in Deep Learning for Visual Computing, Generative AI, Machine Learning, Parallel Computing, and Data-intensive Computing. I've parallelised compute-heavy workloads with **OpenMP** and written **SLURM** batch scripts for strong-scaling and scheduling experiments on HPC clusters.

Bachelor of Computer Science

October 2021–2024

University of Ljubljana

avg. grade: 9.0/10

My studies included topics such as Computer Architecture, Databases and programming in both C and Java, with a focus on **Machine Learning and Computer Vision**.

Experience

Full Stack Developer

October 2024 – March 2025

SRC d.o.o.

- Built an end-to-end platform for internal and cross-enterprise document sharing and e-signing
- Designed the system architecture and database from client requirements
- Containerised with **Docker** and deployed on Microsoft **Azure**
- Integrated Active Directory **SSO** for secure enterprise authentication
- Mentored a junior intern on frontend development

Software Engineer

July 2023 – October 2024

SRC d.o.o.

- Built core features end-to-end: a camera-based sign-on page, an interactive tenant-info map widget, and SMS/email notifications
- Integrated Google Wallet and Apple Wallet for digital visitor passes
- Contributed to the internal employee dashboard
- Delivered a standalone WordPress site

Application tester

August 2022

SRC d.o.o.

- various types of application testing mainly in SoapUI

Hackathons

ViennaUp Hackathon 2026

Teapot — AI Quality Control for Fiber-Optic Trench Documentation

- Built a computer-vision pipeline that screens hundreds of thousands of construction-site images for compliance — verifying cable placement in the trench, trench depth, and on-site safety

Zero One Hack 2026

Industrial AI – Learning and Benchmarking Process Logic

- Built transformer models to learn semiconductor fab process logic — next-step prediction, sequence completion, and anomaly detection across MOSFET, IGBT, and IC families
- Trained and benchmarked on a ~120-token vocabulary and thousands of synthetic sequences (Top-k accuracy, MRR, F1, ROC-AUC)
- Trained and scheduled jobs via SLURM on the Leonardo EuroHPC cluster
